

# Enterprise Home Screen 6.2

Release Notes – Feb. 2024

## Highlights

- **Adds support for role-based managed configurations:**
  - Now supports creation of role-based EHS profiles for storing multiple usage personas on the device
  - **Integrates with Identity Guardian\***, Zebra's secure login and user-role solution

\* A per-device Identity Guardian license is required to activate user roles.

## Device Support

- **Newly added device support in this release:** None

## New in Enterprise Home Screen 6.2

### Role-based managed configurations

Enterprise Home Screen 6.2 now allows multiple EHS configurations on a device based on user roles, which must be aligned with those defined in [Zebra Identity Guardian](#). Visit [TechDocs](#) for details.

## Resolved Issues

- [SPR-51738] Redeploying an EHS profile with user application list no longer duplicates the icons on the user screen.

## Usage Notes

- None

## Known Issues

- A home key button press is mandatory to reflect the ICON size change.
- Admin logout and re-login are mandatory to reflect the reduced setting view in the Admin UI screen.

## About Enterprise Home Screen

Enterprise Home Screen for Android provides a simple way for administrators to control access to apps and settings on a Zebra device without the need to write custom code. Using a simple touch interface, EHS easily limits usage to one or more specified applications, prevents changes to device settings and locks down the file system. It can be configured in seconds, and settings can be deployed via MDM. EHS settings are stored in a simple XML file that's easy to read and edit by hand, if necessary.
